### SAY HELLO TO 'DUNE BUGGY' & 'PINK BARK'

#### Two New Lucrative Prospects for the Allup Silica Group of Tenements

We are pleased to announce that we have expanded our holdings into the South Coast/Goldfields Region with **DUNE BUGGY**, located approximately 20kms from the Coastal Port Town of Esperance, and **PINK BARK** situated between the small townsites of Salmon Gums and Grass Patch, approximately 100kms from Port.

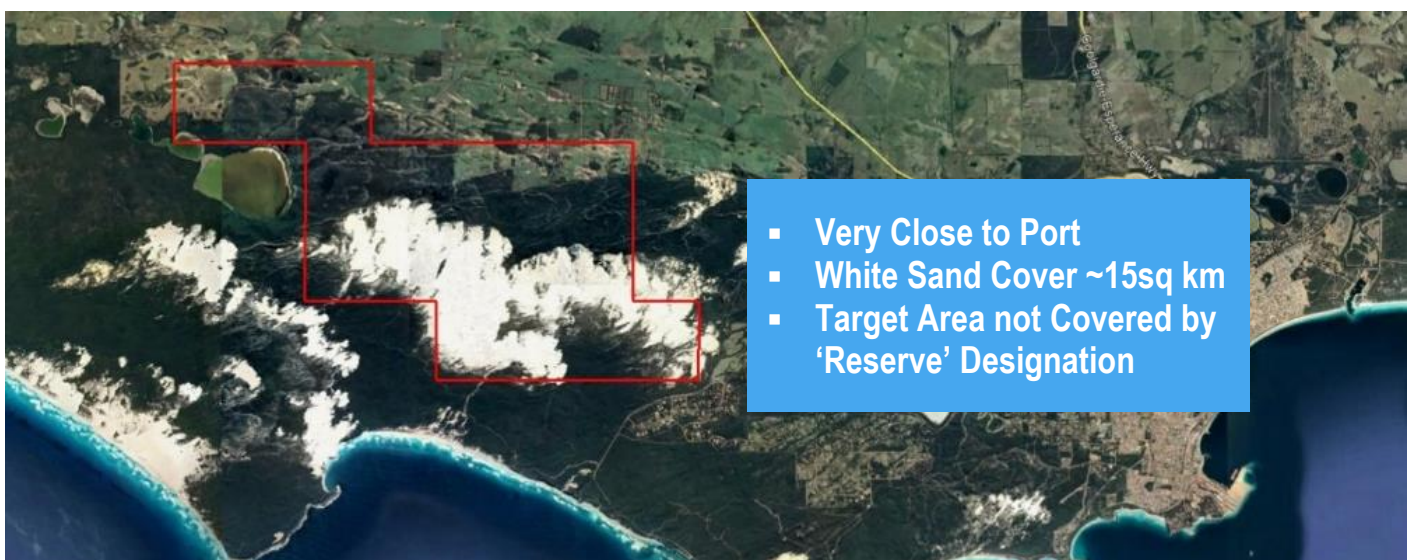

At this stage it should be noted that both of these locations are either under-developed or essentially undeveloped, however what historical data does exist for **PINK BARK** shows recorded sand intersection results.

What we do know is that **PINK BARK's historical drilling** has indicated sand up to 14m in depth, with an average 5m – 7m in thickness. In total it consists of a >100km<sup>2</sup> combination of Crown and Private Landholdings.

At **DUNE BUGGY** the area contains parts which are designated as being for 'Construction Industry Supplies' and as can be seen from the image that follows, the tenement contains a substantial dunes structure of pure white sands.

These three new PENDING Exploration Lease Applications (EL63/2137, EL63/2138 AND EL63/2139) give yet another exciting opportunity for Allup Silica to expand its reach, and its fullest potential, consistent with our 'high-quality, near-to-ports-with-capacity strategy'. We will provide further information as it comes to hand.

- Very Close to Port
- White Sand Cover ~15sq km
- Target Area not Covered by 'Reserve' Designation
